

Congratulations on your purchase of Plank It Wallscapes.

Now that you have your planks, you might be wondering, “what’s next?” We have included this guide to help you determine the materials you will need, as well as a general sequence to follow to install Plank It Wallscapes.

If you are unsure about the installation process, please visit us at www.plankitwallscapes.com to watch our installation video. Don’t worry. It isn’t difficult. A basic knowledge of tools and a general idea of how you want it to look is all that is required.

Architectural Products by Outwater assumes no liability for improper installation.

Tools Required

Hammer

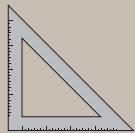

Hand Saw

Tape Measure

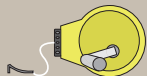

Level

Triangle

Adhesive Gun

Chalk Line

Step Ladder

Note: All hand tools can be substituted with power tools if available

General Installation Guidelines

Begin by unpacking your planks and laying them out in an area close to your project. You want to do this in order to ensure a good color variation in each plank you install. Wait 24 hours before installation to allow the planks to acclimate to room temperature.

It is a good idea to mark a chalk line in conjunction with a level to ensure your first row stays level as you glue the planks to the wall.

Use a chalk line to ensure planks are level.

You will want to stagger your planks to achieve the best look. We have found that by alternating the widths, along with staggering the planks, you will produce an authentic appearance that compliments the realistic texture of our planks.

Example of staggered planks.

Attaching the planks is the easiest part. We recommend using a construction adhesive such as PL Premium or F26. You can also use pin nails or crown staples to hold the planks in place until the glue sets. Just remember, the larger the nail, the more likely it will be seen.

Thank you for purchasing our planks. We really do appreciate your business. Don't forget! Share your photos with us on Facebook and Pinterest. We want to see all your great ideas! #plankitwallscapes
